

ATHARVA DHARMENDRA JAGTAP

+91 7066935597 | atharvaj365@gmail.com | linkedin.com/in/jagtap-atharva | github.com/atharva9167j

Summary

Innovative, results-oriented Full Stack Developer specializing in React, Node.js, and GenAI integrations. Skilled in designing high-performance web applications, scalable APIs, and open-source solutions that significantly reduce manual effort (up to 85%). Experienced in delivering end-to-end freelance projects and leading cross-functional hackathon teams to develop data-driven, impactful platforms.

Experience

Freelance Software Developer & Consultant

September 2024 – Present

Self-Employed

Remote

- Architect and develop custom full-stack solutions, accelerating client project delivery timelines by up to 30%.
- Provide strategic consulting on system architecture, database design, and feature roadmaps for scalable applications.
- Integrate GenAI capabilities and automated workflows to optimize complex business logic and enhance user experience.

Full Stack Development Intern

May 2024 – July 2024

Edba Academy (A Venture of Surfboard India)

Mumbai, India

- Enhanced web app UI/UX using **React.js**, boosting visual consistency and interactive engagement by 20%.
- Optimized front-end and back-end logic, reducing load times by 15% and improving overall system performance by 20%.
- Designed and integrated scalable RESTful APIs, successfully cutting data retrieval latency by 10%.
- Expanded platform capabilities by 30% by leveraging **Gemini APIs** to introduce advanced AI-driven functionalities.

Education

Fr. Conceicao Rodrigues College of Engineering

Aug 2025 – Present

B.Tech in Computer Science & Engineering

Mumbai, India

Vidyavardhini's Bhausaheb Vartak Polytechnic

Aug 2022 – May 2025

Diploma in Computer Engineering

Mumbai, India

Technical Skills

Languages: JavaScript, TypeScript, Python, Java, C, C++, PHP

Frontend: React.js, Next.js, React Native, Electron.js, HTML, CSS, Tailwind CSS

Backend: Node.js, Express.js, NestJS, Flask, FastAPI, Spring Boot, GraphQL, REST APIs, gRPC, WebSockets

DevOps & Cloud: Docker, GitHub Actions, Google Cloud Run (GCR), Google Cloud Monitoring & Logging (GCM/GCL)

Databases: MongoDB, PostgreSQL, MySQL, Firebase's Firestore DB, SQLite

AI / ML & Agentic Systems: TensorFlow, PyTorch, LangChain, LangGraph, Vertex AI, Google Agent Dev Kit, OpenAI SDK

Tools & Platforms: Git, GitHub, VS Code, Postman, Vite, Expo, Jira, N8N, HuggingFace, Google Cloud Platform (GCP), Google Firebase, Vercel, Render

Operating System: Windows, Linux, Mac, Android.

Projects

Preso – AI Presentation Platform | GenAI, React.js, Tailwind CSS, Framer Motion

Vercel

- Developed an AI engine transforming raw text into aesthetic presentations, reducing time-to-first-draft by 10x.
- Optimized rendering logic to handle complex layouts in under 2s, cutting manual formatting effort for users by 85%.

dom-to-pptx – Open Source NPM Library | TypeScript, CSS Geometry

NPM

- Engineered a DOM-to-editable-PPTX library achieving 99% visual fidelity across gradients, shadows, and layouts.
- Mapped 50+ CSS properties, creating a lightweight alternative to server-side exports and reducing server costs by 100%.

Glyphify – AI Handwritten Document Digitizer | React Native, OCR, Google Vision API

GitHub

- Built a cross-platform mobile app digitizing handwritten notes with 95%+ OCR accuracy for 100+ beta users.
- Streamlined educational workflows, saving teachers an average of 5 hours/week on manual transcription.

Hackathons

DevHacks 24-Hour Hackathon | Domain Winner – Best Web Development Project

Feb 2026

- Developed **Empire Protocol**, a 3D browser-based strategy game featuring AI-driven dynamic events.
- Architected real-time web gameplay mechanics to support concurrent users and instant strategic decision-making.

State Level Hackathon - Code-A-thon | Top 10 out of 670+ teams

Feb 2026

- Engineered **SocialSense**, centralizing X, Instagram, FB, and YouTube APIs for streamlined ad and collaborator management.
- Leveraged 14 AI agents to fully automate viral prediction, competitor tracking, and financial reporting workflows.

Nation Level Agri-Tech Hackathon | Top 5 out of 734+ teams

April 2025

- Developed an AI-powered platform to provide farmers with data-driven insights for crop and fertilizer selection.
- Integrated a computer vision model for real-time plant disease diagnosis and an alert system for weather changes.

Achievements & Publications

- Winner** — MSBTE State-Level Technical Paper Presentation (2024)
- Finalist** — MSBTE State-Level Project Competition (2025)
- Publication** — "Windows Login Bypass Techniques - A Red Teamer's Perspective" | Indian Journal of Technical Education
